Entertainment Power Players

Open Items Requiring Client Action

Development on my side — the mobile app and the admin web panel — is complete. Everything listed below is the remaining work, and every item needs something from you to move forward: an account, a credential, or content only you have.

Prepared: 19 October 2026

At a glance

Item	What it's for	Status
1. Apple Developer account	iOS app submission + Apple sign-in	Waiting on client
2. Google Play Console account	Android app submission	Waiting on client
3. RevenueCat real billing keys	Real-money subscription purchases	Ready to flip on
4. 125 quiz questions	Inspiration / Questions content	Waiting on client
5. 225 quotes	Weekly quote rotation content	Waiting on client
6. Store listing assets	App icon, screenshots, privacy policy, support email	Waiting on client

Legend — **Waiting on client**: nothing more to build until this arrives. **Ready to flip on**: built and tested, just needs a credential swap at submission time.

1 Apple Developer Program

WAITING ON CLIENT

Required to submit the iPhone app and to enable Apple sign-in

Cost	$99 USD / year, charged by Apple directly to your card.
Where	developer.apple.com
Why it's yours	The App Store listing and the Apple sign-in capability must be owned by your business account from day one, not mine — ownership can't be transferred after the fact.
Your role	Enroll (Individual is fastest; Organization needs a D-U-N-S number and takes 1–2 weeks longer, but lists your company name as publisher). Then invite me on App Store Connect as App Manager or Admin.
What this unblocks	iOS submission, and turning on the real “Sign in with Apple” button (currently a placeholder in the app since there's no account to verify against yet).
Send back	Confirmation of approval, your Apple Team ID (10-character code under Account → Membership Details), and confirmation I've been added as a user.

2 Google Play Console

WAITING ON CLIENT

Required to submit the Android app

Cost	$25 USD one-time, charged by Google directly to your card.
Where	play.google.com/console
Why it's yours	Same reasoning as Apple — the Play Store listing needs to be under your business identity and card from the start.
Your role	Create the account, choose Organization (recommended, shows your company name) or Individual, pay the fee, and complete Google's identity verification (can take a few days, so start early). Then invite me with Admin or release-management access.
What this unblocks	Android submission to the Play Store.
Send back	Confirmation the account is verified, and confirmation I've been added as a user.

3 Real Billing Keys (RevenueCat)

READY TO FLIP ON

Switches the subscription system from test purchases to real money

Current state	The subscription system is fully built and already verified end-to-end using RevenueCat's Test Store — the full purchase flow (review, confirm, success) works and has been confirmed on a real device.
What's missing	Only the production keys. The app is currently running on test keys because a test purchase doesn't charge a card and doesn't require the store accounts above to exist yet.
Your role	Once items 1 and 2 above are done (Apple + Google developer accounts exist), add your real bank/payout details inside App Store Connect and Play Console, and I'll connect RevenueCat's production configuration to those accounts.
What this unblocks	Real, chargeable subscriptions. At submission time, test keys get swapped for production keys and a real purchase gets run once to confirm the live path works end-to-end before launch.
Send back	Nothing yet — this step happens automatically once items 1 and 2 are in place. No separate action needed from you beyond those two.

4 125 Quiz Questions

WAITING ON CLIENT

Content for the app's Inspiration / Questions feature

Current state	The feature itself is fully built: categories, question groups, the list/reveal screens in the app, and a bulk CSV import tool in the admin panel. It currently runs on placeholder test content.
What's missing	The real 125 questions from you, organized by category.
Your role	Provide the 125 questions as text, in the categories you want (an import template is available on request if it's easier to fill in directly).
What this unblocks	Real content replacing placeholders — this is a content swap, not new engineering work, so it can go in anytime without needing another build cycle.

5 225 Quotes

WAITING ON CLIENT

Content for the app's weekly quote rotation

Current state	The rotation mechanism is fully built — a 32-week no-repeat schedule with admin CRUD and bulk import, already wired into the app's Inspiration feed. It currently runs on placeholder test content.
What's missing	The real 225 quotes from you.
Your role	Provide the 225 quotes as text (with attribution if applicable).
What this unblocks	Same as the questions above — a straightforward content swap once received.

6 Store Listing Assets

WAITING ON CLIENT

What the public sees on the App Store and Play Store pages

What's needed	Final app icon (if different from the current build), store screenshots, a privacy policy, and a support contact email.
Your role	Provide these, or confirm the current in-app branding should be used as-is for screenshots.
Timing	Not urgent yet — only needed right before submission, but flagged here so it isn't a surprise at the end.

Nothing above requires further development time on my end — each item is either a credential/account only your business can create, or content only you have. As soon as any item lands, I can move on it immediately.
